

Hanwa Co., Ltd.

On the Recycling of Cemented Carbide Tool Scrap

Our company is committed to the proper management and recycling of cemented carbide tool scrap, in accordance with the "Guidelines for Sorting, Storage, and Disposal to Promote the Recycling of Cemented Carbide Tool Scrap" established by the Japan Cutting & Wear-Resistant Tool Association.

These guidelines aim to reinforce stable supply chains and resource circulation by promoting the return and utilization of critical mineral resources, such as tungsten contained in cemented carbide tool scrap, back into the domestic manufacturing base. The guidelines outline basic concepts and recommendations for the appropriate sorting and storage of such scrap.

In line with the purpose of these guidelines, we will continue to promote business activities that support the effective use of resources and the reduction of environmental impact. For more details, please refer to the link below.
